

ATOL

**Column radiators**

# Atol: Column radiators

Owing to their round edges, making them much safer, and elegant design, ATOL column radiators are often installed in high-traffic areas in public buildings. The steel columns contribute to the low weight of the radiator. Individual columns consist of a specific number of pipes, as indicated in the radiator's identification. For example: C3 refers to a column made up of three pipes. ATOL radiators feature optimum heating fluid circulation with high heat-transfer efficiency. They are also suitable for low-temperature systems. Their high output makes them a popular and sought-after choice for installation in renovated old residential buildings, while their shape facilitates cleaning and maintenance.

△ atol C2 – horizontal

△ atol C2 – vertical

## Basic specifications

Material	steel tubes diameter 25 mm, thickness 1,25 mm
Max. operating overpressure	1 MPa (10 bar)
Testing overpressure	1,3 MPa (13 bar)
Max. operating temperature	95 °C
Basic colour	snow white RAL 9016
Connection thread	G1/2“ (G3/4“ or G1“ on request)
Built-in valve thread (VL,VR)	M 30 × 1,5 mm
Width of one element	46 mm +/- 1,5 %
Max. number of elements	see the Technical parameters table

## Features

- Elegant radiators with a smooth surface
- Ideal replacement for conventional column heating units
- Round edges to minimize the risk of injury
- Easy service and cleaning
- High heat output
- Excellent heat-transfer fluid circulation
- Also suitable for low-temperature systems

*Stylish retro design in modern colours...*

# Atol radius: Curved column radiators

The heating unit is a great complement to rounded walls, polygonal floor plans and other architectural elements. Atol Radius is made to fit the curvature of the wall and can often be used in place of several individual units required to fill in the rounded space, providing you with a balanced interior. This is also possible thanks to the wide range of smooth, structured or metallic colours available in a multitude of shades and hues.

The radiator dimensions should always be measured directly at the installation location as the actual curvature usually varies from the drawing documentation. Especially with regard to older buildings, the variable wall radius should always be factored in and the radiator suitability considered.

△ atol C3

## Basic specifications

Material	steel tubes diameter 25 mm, thickness 1,25 mm
Max. operating overpressure	1 MPa (10 bar)
Testing overpressure	1,3 MPa (13 bar)
Max. operating temperature	95 °C
Basic colour	snow white RAL 9016
Connection thread	G1/2“ (G3/4“ or G1“ on request)
Built-in valve thread (VL,VR)	M 30 × 1,5 mm
Width of one element	46 mm +/- 1,5 %
Max. number of elements	see the Technical parameters table

## Features

- Individual solution
- Retro design
- Curved design
- Round corners - injury prevention

## Atol Radius options

- all models - C2, C3, C4, C5, C6 - can be produced in curved versions
- colour design identical to standard units
- the maximum height of curved radiators is 2,000 mm

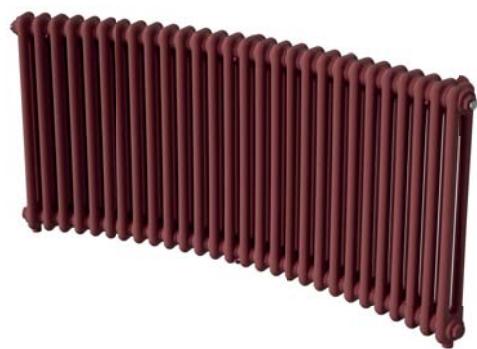

*When you need to conform to shape constraints...*

△ atol C2

△ atol C2

## How to design and select your own radiator

Select the desired shape (C2 - C6 models), height and length (number of columns) of the radiator, taking into account the output and dimensional requirements. Specify the heating system connection and the required connection sets based on the project and/or the existing piping. Depending on the wall type, choose between wall or floor mounting options. See the ISAN colour reference chart or the broad range of RAL colours to choose the right coating shade and to best integrate the Atol unit into your interior.

/page 16

# How to determine radiator dimensions

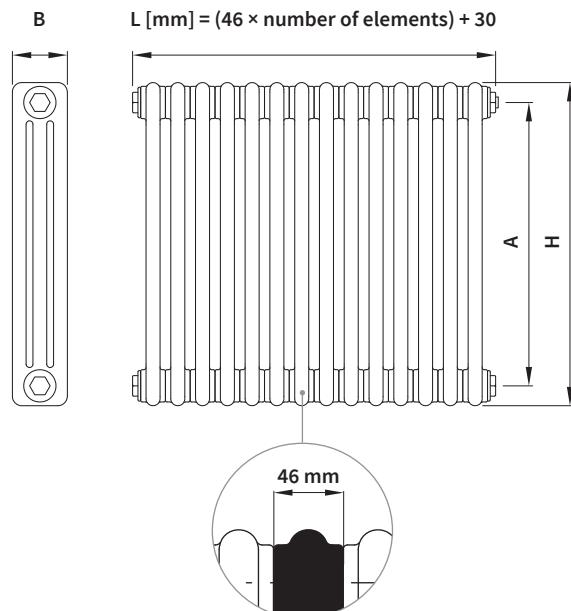

To determine the right size of the heating unit, refer to the table of technical parameters provided.

**Unit height** - the models available range from 300 to 2,500 mm in height. Make sure to leave sufficient space under the radiator to allow for cool air circulation and easy floor cleaning.

**Unit width** - depending on the type of the Atol radiator used, the unit width can range from 66 to 230 mm (C2 to C6 type). Remember to take the distance of the radiator from the wall into account.

**Unit length** - determined by the sum of the length of the columns used, which is 46 mm. Add 30 mm for the plugs and do not forget to leave some room for the connection fittings/valves.

The overall heating output of the Atol unit is determined by its dimensions. Refer to the technical documentation to check the heating water parameters and calculate the unit output.

Dimensions of the radiator above:

B = 148 / L = 1 226 / A = 830 / H = 900 mm

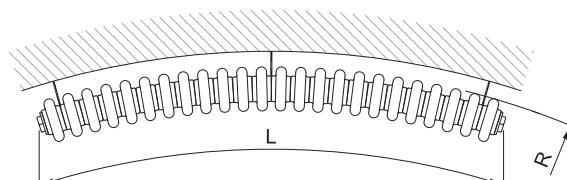

## How to determine the radiator radius

When considering installing a curved radiator, particular attention should be devoted to determining the radius of the wall curvature. The measurements usually need to be taken directly on site.

The radius of the radiator above:

L = 1 318 / R = 1 800 mm

C2

R = min. 1 100

C3

R = min. 1 150

C4

R = min. 1 350

C5

R = min. 1 400

C6

R = min. 1 450

# Column radiator connection

Heating system lines can be conducted in floors, in walls, under ceilings or through entries between floor levels. To facilitate connection to the heating system, the Atol comes in a range of design variations, including a combined heating water inlet and outlet. Specify your preferred connection by entering the relevant two-letter abbreviation at positions 13 and 14 of the order code.

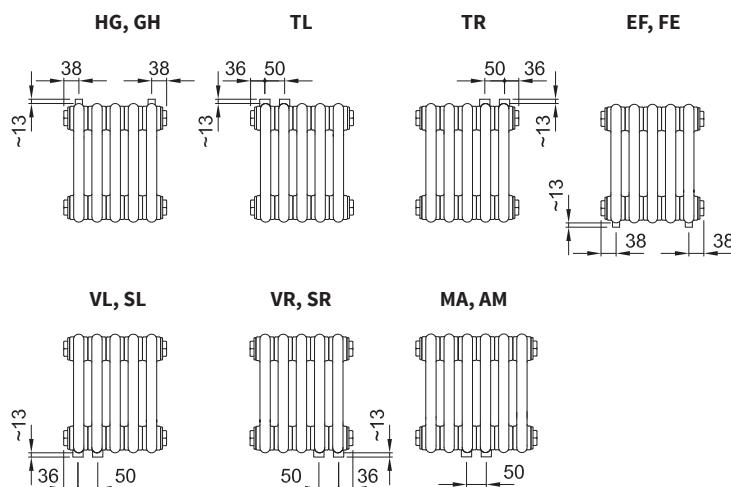

**Connection type:**  
**AM**

## Connection options

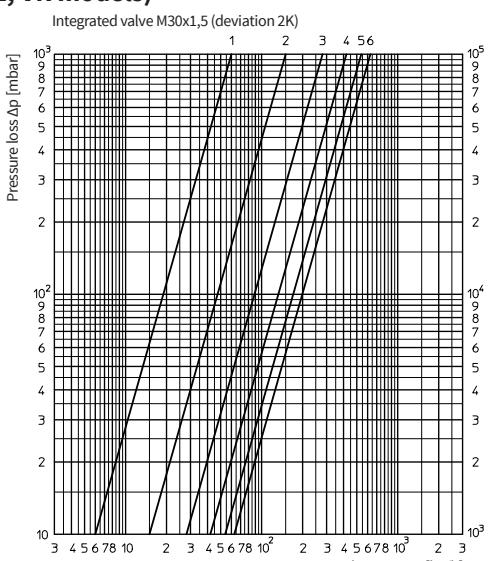

\* the centre connection (MA, AM) requires an even number of columns

## ATOL connection details

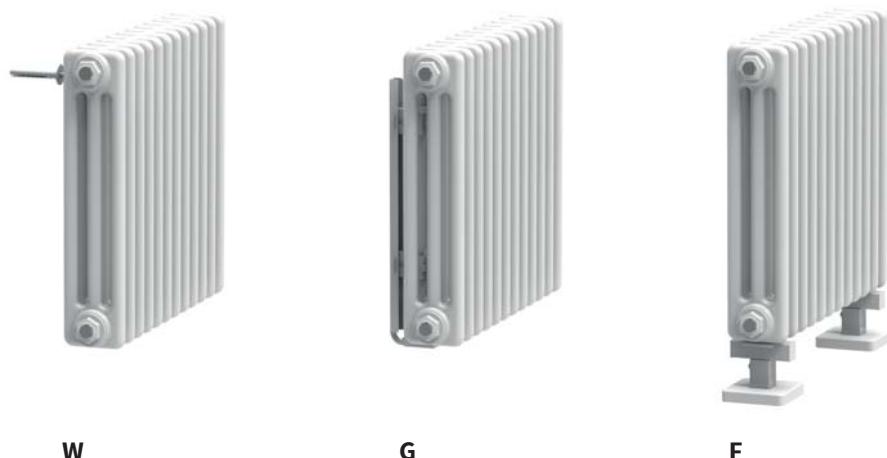

## Integrated thermostatic valve parameters (VL, VR models)

# Atol mounting options

ATOL radiators can be mounted on a wall, using hooks or brackets. The radiator utilizes feet (stands) for floor mounting.

**W**

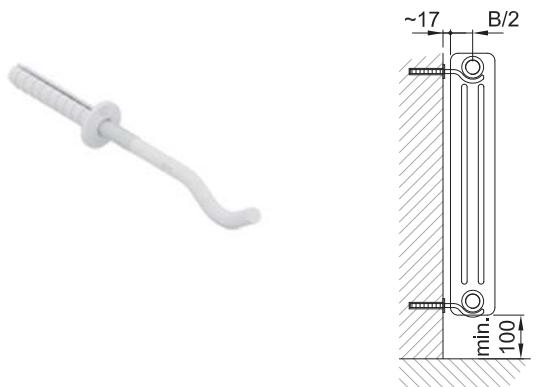

**G**

**F**

## W - mounting on walls made of solid material

Designed for mounting ATOL units on walls made of solid bricks, blocks or cast concrete. The wall must comply with the minimum thickness requirements.

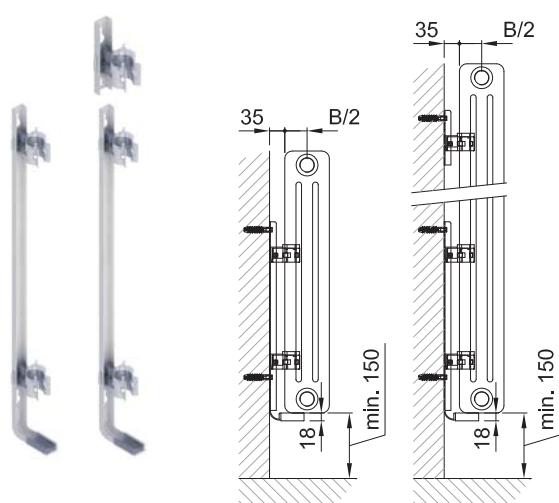

Number of columns	Radiator length	Number of hooks
4-21	214 - 996 mm	3
22-48	1 042 - 2 238 mm	4
49-60	2 284 - 2 790 mm	5

## G - wall-mounting alternatives using GTX, GTX+GTXP brackets

These wall brackets provide an alternative to the W brackets, facilitating ATOL mounting on all other types of walls. Thinner walls and plasterboard walls require additional reinforcement to meet the load-bearing capacity requirements.

Number of columns	Radiator length	Number of brackets	
		GTX H ≤ 1000 mm	GTX + GTXP H > 1 000 mm
4-9	214-444 mm	2	2
10-20	490-950 mm	2	3
21-35	996-1 640 mm	3	4
36-48	1 686-2 238 mm	4	5
49-60	2 284-2 790 mm	5	6

## F - Floor mounting

Stands designed to anchor the radiator to the floor. The radiator is fixed to the stands using clamps. Additional wall fastening is recommended (e.g. the W brackets) for higher radiators to prevent the floor anchoring from breaking.

Number of columns	Radiator length	Number of stands
4-21	214 - 996 mm	2
22-48	1 042 - 2 238 mm	3
49-60	2 284 - 2 790 mm	4

### Plastic covers

Plastic covers are available in the following colours:

RAL 9016

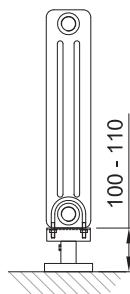

RAL 9006

RAL 7024

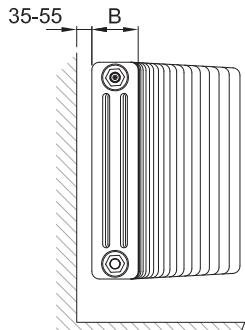

RAL 9005

## R - mounting on walls made of solid material for the Radius version

Atol Radius radiators feature special wall-mounting brackets. Their number and design is determined by the base on which the radiator is to be mounted. The bracket is designed to compensate for slight deviations in curvature of the wall.

The number of brackets is determined individually according to the project

## Accessories

### Chrome hook - 2 pc set

Order code: O15AM80-01-0101

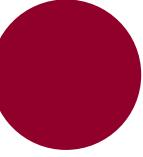

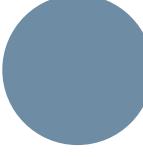

### Chrome towel rail

- the spacing of the towel rail axes is 322 mm
- for ATOL with 9 or more columns

Order code: O15AM80-02-0101

# Atol: Heating bench

The Atol radiator is placed horizontally between a pair of stable sideboards. The upper part features a massive wooden board. The radiator can be used to sit or place things on, providing a practical solution to room heating.

△ atol L4 Birch

## Technical data

Material	solid feet board heating unit	steel beech Atol C4 · 5 columns · Ø 25 mm pipe · 1.25 mm thick
Max. operating overpressure	1 MPa (10 bar)	
Test overpressure	1,3 MPa (13 bar)	
Max. operating temperature	95 °C	
Base colour	snow white RAL 9016	
Connection threads	G1/2" (to order G3/4" or G1")	
Built-in valve thread (VL,VR)	M 30 × 1,5	

## Features

- Stable feet
- Concealed connection fittings
- Massive beech top
- Wide colour selection

## Suitable for use in

- public buildings
- entrance areas, corridors
- gyms
- changing rooms, hallways
